Assessment Task: 03

Exploratory testing: Exploratory testing is a testing approach where testers perform testing based on their knowledge, experience, and intuition also experience, rather than following predefined steps.

Happy-path testing: Happy-path testing is a type of software testing that uses known input and produces an expected output. Also referred to as golden-path or sunny-day testing, the happy-path approach is tightly scripted. It verifies that the system functions correctly under normal conditions without errors or exceptions.

Unit testing: Unit testing is the process where you test the smallest functional unit of code. Software testing helps ensure code quality, and it's an integral part of software development. It ensures each unit behaves as expected and meets its design specifications.

Functional testing: Functional testing is a type of software testing where the basic functionalities of an application are tested against a predetermined set of specifications. It involves checking both the functional and non-functional aspects of the application to ensure it performs as intended in various scenarios.
