Submitted for:

Industrial Training 2

ICE 498

Visit Date	April 08, 2026
Organization	Live Technologies Ltd.
Location	Panthapath, Dhaka, Bangladesh
Website	http://live-technologies.net/
Course Code	ICE 498
Course	Industrial Training 2
Report Type	Industrial Visit Report
Submitted to	**Engr. Md. Zahirul Islam** Assistant Professor Information & Communication Engineering Daffodil International University
Submitted by	**Iftekhar Ahmed Bijoy** ID: 221-50-079 Information & Communication Engineering Daffodil International University

1. Introduction

On April 08, 2026, our group undertook an industrial visit to Live Technologies Ltd. as part of our Industrial Training 2 course curriculum. The purpose of this visit was to gain first-hand exposure to the workings of a leading technology company in Bangladesh — examining its organizational structure, team dynamics, ongoing projects, and business operations in a real-world professional setting.

Live Technologies Ltd. is one of Bangladesh's pioneering digital platform and managed service solution providers, with over a decade of experience in building cutting-edge technology products for both local and global markets. The visit provided us invaluable insight into how different departments — IT, Marketing, and Tech teams — collaborate to deliver complex, large-scale software projects.

2. About Live Technologies Ltd.

Live Technologies Ltd. was established in 2011 as a small technology startup based in Dhaka, Bangladesh. Over the past decade, it has evolved into one of the country's leading digital platform companies, with a footprint in 8 countries impacting millions of people through innovative digital solutions in education, healthcare, sports, entertainment, and finance.

2.1 Company Overview

Founded	2011
Headquarters	Dhaka, Bangladesh
Employees	80+
Completed Projects	120+
Global Presence	8 Countries (Thailand, Malaysia, Qatar, Dubai, Nepal, and others)
Certifications	ISO Certified

2.2 Mission & Vision

Mission: Create value in customers' lives through innovation and sustainable digital access.

Vision: Transforming Technology and OTT Business at global scale.

2.3 Core Service Areas

- Telecommunication Operator Services — Providing Telco systems and services for all 4 major mobile operators in Bangladesh.
- Scalable Application Design — Development of applications for Android and iOS platforms.
- Video Streaming Platform — Operating the largest CDN-based streaming platform in Bangladesh.
- Content Production & Sourcing — A rich library of digital content for entertainment and information.
- Digital Marketing & Advertisement Delivery — Running targeted digital marketing campaigns globally.
- SMS & IVR Platform — Ensuring reach even where internet is unavailable.

2.4 Notable Products & Platforms

- Cinematic — OTT platform offering full-length Bangla movie streaming and downloads.
- Cinespot — Cinema-focused entertainment portal.
- Duronto — Bangla-language browser for local digital access.
- GameOn — Online gaming platform.
- Live Radio — Internet radio streaming service.
- Live Sportz — Sports streaming with mobile broadcasting rights from FIFA, ICC, and BCC.
- vDoc — Telemedicine platform (launched 2020).
- Buddy — Social networking platform.
- Survey Lancer — Digital survey and analytics platform.
- IQRA — Religious content service.
- MEDICO — Healthcare super app (current flagship project — see Section 4).

3. Visit Overview & Team Interactions

During the visit, we had the opportunity to meet and interact with multiple teams and departments within the organisation. The sessions were structured to give us a comprehensive understanding of how each team functions and contributes to the company's overall goals.

3.1 IT Department

The IT team gave us an overview of their infrastructure management, server operations, and the backbone systems that support the company's multiple digital platforms. We learned about their approach to maintaining uptime and reliability for large-scale streaming services that cater to millions of users across different networks.

3.2 Marketing Team

The marketing team demonstrated how they drive user acquisition and engagement for their various products. Key topics discussed included digital marketing strategies, campaign management across social media and telecom operator channels, and the integration of marketing analytics into product development decisions.

3.3 Tech/Development Team

The development team provided the most technically enriching session of the visit. We observed their Agile-based workflow, sprint planning processes, and how they use modern development stacks to build and maintain complex applications. The team emphasised the importance of code quality, documentation, and continuous integration practices.

3.4 Discussion Session

A formal discussion session was held in the conference room where the management team sat down with our group to answer questions about career paths in the tech industry, the challenges of building products for the Bangladeshi market, and the company's future roadmap. The open and collaborative atmosphere of the meeting reflected the company's culture of accessibility and mentorship.

4. Visit Photographs

The following photographs document key moments from the industrial visit, including the MEDICO product showcase, team briefings, conference room discussions, and group photographs at the Live Technologies office.

4.1 MEDICO Project Display & Office Showcase

4.5 Group Selfie at Live Technologies Office

Figure 6: Group selfie at the Live Technologies office with the MEDICO branding backdrop.

5. MEDICO — Flagship Healthcare Project

One of the highlights of our visit was a detailed walkthrough of MEDICO, Live Technologies' current flagship project and an ambitious entry into Bangladesh's digital healthcare sector. MEDICO is a comprehensive healthcare super-app designed to bring 24/7 health services directly to users' mobile phones.

5.1 Key Features of MEDICO

- Home Delivery of Emergency Medicines — Users can order urgent medicines for same-day or express delivery.
- Lab Tests — Reliable and convenient pathology and diagnostic lab test booking from home.
- Ambulance & Air Ambulance Services — 24/7 nationwide ambulance dispatch, including air ambulance capabilities.
- Medicine Reminder — In-app medication reminders to help users stay on track with prescriptions.
- Health Package Subscriptions — Users can subscribe to curated health plans.
- Buy Medicine — Online pharmacy feature enabling the purchase of medicines from anywhere.
- Call an Ambulance — Direct one-tap ambulance call with 24/7 nationwide service.
- Call for Nursing Care — 24/7 nursing care request with nationwide coverage.
- Upload Lab Reports — Users can upload and store their medical reports digitally.
- Discount Partners — Integrated discount system with partner pharmacies and healthcare providers.

5.2 Technology Stack & Platform

MEDICO is developed as a cross-platform mobile application with a supporting web-based doctor and admin dashboard. The application integrates a range of real-time services, including GPS-based ambulance tracking, an e-pharmacy backend, and a telemedicine consultation module. The platform is built on a scalable cloud architecture to support growing demand across Bangladesh.

5.3 Market Impact

MEDICO addresses a critical gap in Bangladesh's healthcare infrastructure by making quality healthcare services accessible digitally, especially in areas where physical access to hospitals or pharmacies can be challenging. The 24/7 nature of its core services — particularly the ambulance and nursing care features — represents a significant advancement in emergency healthcare accessibility in the country.

6. Key Learnings & Observations

The industrial visit to Live Technologies Ltd. provided numerous valuable lessons that are directly relevant to our academic and future professional development:

- Real-World Software Development: We observed how a professional development team manages multiple products simultaneously using Agile methodologies, version control, and CI/CD practices — tools deeply interconnected in practice.
- Cross-Functional Collaboration: The interaction between IT, Marketing, and Tech teams demonstrated the critical importance of communication and alignment across departments for a product like MEDICO to succeed.

- Product Lifecycle Management: From ideation to deployment, we gained insight into how Live Technologies manages the full lifecycle of a digital product, including requirements gathering, user feedback loops, and iterative releases.
- Startup to Enterprise Journey: The company's history from a 2011 startup to a multi-national technology firm with 80+ employees and 120+ projects was an inspiring demonstration of focused, value-driven technology work.
- Healthcare Technology Opportunity: The MEDICO project highlighted the immense opportunity in applying technology to social and healthcare challenges in Bangladesh, where digital disruption is still at an early stage.
- Professional Workplace Culture: The open and welcoming environment at Live Technologies — including direct access to senior management — emphasized the importance of a collaborative organizational culture in driving innovation.

7. Conclusion

The industrial visit to Live Technologies Ltd. on April 08, 2026, was a thoroughly enriching experience that bridged the gap between academic learning and professional practice. Witnessing a real-world technology company that has built an impressive portfolio of products — from entertainment and sports streaming to digital healthcare — provided us with both inspiration and practical understanding of what a career in the technology sector truly involves.

The MEDICO project, in particular, left a lasting impression as an example of how technology can be leveraged to address urgent social challenges. The dedication, expertise, and collaborative spirit demonstrated by the Live Technologies team across all departments served as an excellent model of professional excellence.

We are grateful to Live Technologies Ltd. for hosting us and providing such an open and informative visit. The knowledge and experience gained will undoubtedly inform our studies and future careers in technology.

Appendix: Course Completion Certificate

The following certificate was awarded to Iftekhar Ahmed Bijoy upon successfully completing the Ethical Hacker course offered by the Cisco Networking Academy. This course, completed on 26 March 2026, provided foundational and advanced knowledge in ethical hacking methodologies and cybersecurity practices — skills that are directly relevant to understanding the security considerations involved in large-scale technology deployments such as those observed during the industrial visit to Live Technologies Ltd.
