Criterion 6-10 Assessment and Audit Report of IQAC on BAETE SAR of PSAC, ICE, DIU

Department : Department of Information and Communication Engineering (ICE)

Program : Bachelor of Science in Information and Communication Engineering

Evaluation Rubric : The manual of the Board of Accreditation for Engineering and Technical Education (BAETE)

Evaluation Rubric, Board of Accreditation for Engineering & Technical Education (BAETE)

Level	Meaning (BAETE Language)
Compliance (C)	Fully meets BAETE benchmark; evidence is adequate, consistent, and implemented
Concern (CN)	Largely meets the benchmark, but minor gaps or inconsistent implementation
Weakness (W)	Partially meets benchmark; significant gaps affect quality
Deficiency (D)	Fails to meet essential requirements

Reviewer:
1. Internal Auditor: IQAC Team, DIU.

Overall Observation

The SAR for Criteria 6-10 requires major revision before BAETE submission. Most sections lack updated data, organized evidence, annexures, meeting records, official documents, and proper justification. Several items are marked as Concern, Weakness, or Deficiency, indicating the need for comprehensive evidence-based improvement and proper alignment with the BAETE manual.

Criterion 10: Interactions with Industry

Sub-Criteria	Findings	Remarks	Recommendations
10.1 Industrial Advisory Panel	▪ The establishment date of the Industrial Advisory Panel is not mentioned in the report. ▪ Meeting notices, attendance lists, and minutes of meetings for the last three academic years are stated to be available in the department office; however, these documents were not provided as annexures or accessible links in the SAR.	Weakness (W)	Please provide the following documents: ▪ Proposal for formation; ▪ Dean's recommendation; ▪ Approval of the Vice Chancellor; and ▪ Memorandum. Include meeting notices, attendance records, and photographs as properly indexed annexures.
10.2 Alumni Association	▪ The alumni association is inconsistently named across documents (e.g., "DIU ICE/ETE Alumni Association" in correspondence and "DIU ICE Alumni Association" in the constitution). ▪ No official approval document for the formation of the departmental alumni association was found. ▪ The Executive Committee appears to have been formed without verified institutional affiliation. ▪ Meeting minutes of 2026 only and the digital signatures were used for most of the meetings (e.g. Venue: BASIS Bhavan, Karwan Bazar). ▪ Evidence of regular meetings, including notices, minutes, and attendance records, has not been provided.	Weakness (W)	▪ The department needs to produce all approval copy of the formation of departmental alumni association (DIU ICE Alumni Association) for proper documentation. ▪ The association should operate in accordance with its approved operating process as we have found that Executive Committee do not have any official affiliation. ▪ Maintain and provide systematic records of meetings, including notices, minutes, and attendance sheets.
10.3 Participation of Industry in Academic Updates	▪ No adequate evidence was provided demonstrating participation of industry experts in curriculum review or academic updates at the SAR. ▪ The role of MoU-based collaboration in ensuring industry input is unclear and not supported with documentary evidence.	Weakness (W)	▪ Clear demonstration is needed on how industrial participation is ensured in the establishment, update and improvement of the objectives, outcomes and curriculum to ensure that these aspects remain relevant to the industry. ▪ Include supporting documents in the annex for the explanation to be provided.
10.4.1 Internships	▪ At the manual (BAETE), the title at 10.1 mentioned as Internship. ▪ Most BAETE-aligned universities implement: Industrial Training: 4 to 8 weeks (1–2 months) Internship (credit-based): 8 to 12 weeks (2–3 months) or one full semester placement ▪ Approval copies and DIU central memos related to internship/industrial training rubrics are not included in the SAR or annexures. ▪ The approval copies and DIU central memo for the internship/ Industrial Training rubrics have not been included in the report or annex.	Concern (CN)	▪ Provide updated curriculum documents clarifying internship and industrial training duration. ▪ Include official approval documents and central memos on industrial internship/industrial training rubrics in the annex.
10.4.2 Final-year Design Project	Evidence of industry involvement in selecting project topics, supervising project activities and assessing project work was clearly absent at the report; therefore, the documents are not aligned with the requirement.	Weakness (W)	Provide properly indexed evidence in the annex to demonstrate industry involvement in: ▪ project topic selection; ▪ supervision of project activities; and ▪ project assessment.
10.4.3 Industry Visits	▪ The report needs clear explanation on how student learning and outcome achievement from industry visits are assessed. ▪ We have noticed the very limited involvement of the faculty members in planning, supervising, and documenting industrial visits as per submitted report).	Concern (CN)	▪ Explain how student learning and outcome achievement from industry visits are assessed, and provide supporting documents for the explanation. ▪ Ensure broader faculty involvement in organizing, supervising, and documenting industrial visits to maintain academic rigor and compliance.
