Daffodil International University

Department of Information and Communication Engineering

Procedure for Assessment of Student Learning and Faculty Involvement in Industry Visits

(Implementing the DIU Policy on Study/Industry Visit/Field Visit, Registrar memo DIU/Reg./Memo/03/2824/2026-256 dated 25 October 2026)

1. Purpose

This procedure explains how the Department assesses student learning and the achievement of course outcomes from industry visits, and how faculty members share the planning, supervision and documentation of the visits. It applies to every industry visit arranged by the Department, in particular those under ICE 498 Industrial Training II.

2. Link with course outcomes

Before each visit the course teacher states which course learning outcomes (COs) the visit supports and records them in the visit proposal (Section 6). The learning objectives are also written in the permission letter to the host organization.

CO (to be confirmed from the approved ICE 498 course outline)	Assessed through
[CO_: explain the technologies, systems and processes of an ICT/telecom/broadcast organization]	Visit report – technical understanding; viva
[CO_: relate industry practice to courses studied]	Visit report – link to coursework
[CO_: identify societal, safety, environmental and professional practices]	Visit report – societal and safety awareness
[CO_: communicate observations in a written report and orally]	Report quality; viva

3. How student learning is assessed

- Each student (or group, as stated in the course outline) submits a visit report within [7] days of the visit, using the department report format (objectives; overview of the organization; technologies and processes observed; link to courses studied; societal, environmental and safety aspects; reflection).
- A short viva or quiz on the visit is held by the faculty members who accompanied the visit.
- The report and viva are marked with the rubric below (20 marks), which is mapped to the COs and Program Outcomes (POs).
- The visit carries [__ %] of the total marks of ICE 498, as stated in the course outline (DIU policy, clause 4.3).
- Marks are entered in the Visit Assessment Mark Sheet. CO attainment is calculated as the percentage of students who score at least 60% on the criteria mapped to that CO, and is reported to the course file and the CQI process.

Criterion	Marks	CO	PO
Technical understanding of what was observed	5	[CO_]	PO1, PO5
Link to coursework	4	[CO_]	PO2
Societal, environmental and safety awareness	3	[CO_]	PO6, PO7
Report quality (structure, clarity, figures, references)	4	[CO_]	PO10
Viva / short quiz on the visit	4	[CO_]	PO12

Total	**20**		

Level descriptors for each criterion: Excellent (≥ 80%), Good (60–79%), Satisfactory (40–59%), Poor (< 40%). The CO and PO mapping is a proposal for approval in the department meeting.

4. Faculty involvement and responsibilities

To ensure broader faculty involvement, responsibilities are shared among faculty members and rotated each semester:

Role	Responsibility	Assigned by
Industry Visit Coordinator (one faculty member per semester)	Prepares the semester visit plan; keeps the visit register and all records; reports to the Head and the CQI committee.	Head
Faculty in charge (for each visit)	Contacts the host; prepares the visit proposal and permission letter; conducts the pre-visit orientation; leads the visit; submits the post-visit faculty report.	Head / Coordinator
Accompanying faculty members	Supervise students during the visit as per the DIU ratio (1 faculty up to 25 students; 1–2 up to 50); take attendance at departure and return; take photographs.	Head / Coordinator
Course teacher (ICE 498)	Links the visit to COs; sets report format and deadline; marks reports with the rubric; enters marks; calculates CO attainment.	Course allocation
Second assessor	Moderates a sample of at least 20% of marked reports and signs the mark sheet.	Head
Batch Adviser / Coordination Officer	Collects guardian consent forms and verifies by SMS and telephone (DIU policy, clause 6).	Head

No faculty member shall act as faculty in charge for more than [two] consecutive visits, so that every faculty member takes part in organizing and supervising visits over the academic year.

5. Documents kept for each visit

- Visit proposal with CO linkage, risk assessment and approval (at least 10 days before the visit)
- Permission letter to the host and the host's confirmation
- Notice to students and orientation record
- Guardian consent forms (DIU format) and verification record
- Attendance sheet signed at departure and return
- Post-visit faculty report (objectives achieved, participation, academic outcomes, photographs, challenges, risks, financial summary, recommendations – DIU policy, clause 12)
- Student reports, marked rubrics, mark sheet with CO attainment, and moderation record
- Entry in the Industry Visit Register

6. Approval

This procedure was approved in the departmental meeting held on _____ and is effective from _____.

_____ _____

Industry Visit Coordinator
Department of ICE

Head
Department of ICE
